

High-rise Power: Is renewable energy a good FIT for your building?

TowerWise Seminar Thursday, Feb. 4th — 8:30 a.m.–3:30 p.m.
The Old Mill Inn, Toronto - Breakfast and Lunch Included

Ontario's new *Green Energy Act* and Feed-in Tarrifs (FIT) are sparking great interest in local wind power, solar electric, and geothermal heating and cooling projects. Incentives have also recently increased for solar hot water and the province may soon have a standard offer program for combined heat and power.

Have you been considering green energy options? Wondering if it is right for your building? Are you curious about what systems cost and what you can save or earn?

GET THE FACTS before you talk to vendors. Presentations by leading independent experts will help you to:

- ☀ Understand the *Green Energy Act* and what it means for you.
- ☀ Look at the costs and benefits of different renewable power sources in easy to understand terms.
- ☀ Learn what works and what doesn't from Toronto area building owners/operators who have implemented renewable energy projects.
- ☀ Determine the best course of action to either conserve energy and/or generate power and heat in your building(s).

This seminar is specifically designed for owners and operators of high-rise residential properties (including rental apartments, condominiums, co-ops, not-for-profits, low income and long term care facilities) to help you make informed decisions .

No vendors will be presenting at this session - independent advice only.
A take-home binder with tools and background information will be provided.

Cost: \$105 (GST included) **Early Bird Registration: \$80** (before Jan. 12, 2010)
